

APPENDIX 1

POPCORN 1.0: Deliverable Progress Tracker

How to use this tracker

1. Each pillar has its own table. The first column lists deliverables; the remaining columns are one per tracked year.
2. For each year, click into the cell, then apply *Background Colour* based on the colour legend.
3. Add a short note inside the cell if helpful (e.g. “*delayed — funding*”).
4. If a row was green the previous year, leave the next year blank.

Legend

Not initiated	In progress	Completed	Not reached
---------------	-------------	-----------	-------------

Pillars & Deliverables

Start Up of Platform Administrative and Legal Activities			
Deliverable	2023	2024	2025
Hire POPCORN Platform Manager at MICYRN			
Execute the Research Collaboration Agreement and Data and Material Access Agreement for academic projects, with the 16 participating sites			
Transfer the funds to every site for the year			
Creation of Platform Infrastructure inclusive of pillars, teams, and committees			
Development of clear operational processes and guidelines			

Community Engagement Mentorship			
Deliverable	2023	2024	2025
Develop POPCORN-specific educational resources for mentorship and training, based on a POPCORN-specific needs assessment exercise			
Harmonize the mentorship and training programs across POPCORN pillars and develop a national POPCORN platform for investigators and trainees			
Create a national POPCORN-specific repository of national mentors / mentees, with pairing of mentor / mentee dyads (matching Early Career Researchers and trainees to more senior investigators)			
Engage with established POPCORN-affiliated national programs, such as ENRICH, for the formal ECR training and mentorship program; support 2 ECRs for a two-year ENRICH program enrollment (CCHCSP's newly CIHR-funded health research training platform) and impart advanced competency training through personalized mentorship that is multi- and inter-disciplinary			

Community Engagement Patient and Family Engagement			
Deliverable	2023	2024	2025
Recruit and maintain a core group of patient and family advisors to support ongoing and ad-hoc engagement opportunities (ongoing objective as needs evolve)			
Develop SOPs and training material for network members to support embedded patient engagement practices			
Integrate Advisors and / or PE specialists across all three levels of the network and across all pillars			

Community Engagement Health Equity, Diversity, Inclusion, and Indigeneity			
Deliverable	2023	2024	2025
Community-based interface and engagement: leverage existing community partnerships to build a potentially sustainable interface that enables the inclusion of participants who are seen in healthcare settings (outside of pediatric hospitals) that are likely to encounter significant numbers of persons from racialized communities			

Community Engagement Health Equity, Diversity, Inclusion, and Indigeneity			
Deliverable	2023	2024	2025
Harmonized data collection on health equity measures: adapt the Caregiver (and Youth) Health Equity Survey to collect data on gender, race and ethnicity, language, disability, education, income, and other sociodemographic variables			
Qualitative interviews to understand experiences of pediatric healthcare providers and researchers during the COVID-19 pandemic applying an intersectional lens			
Participant inclusivity and engagement in research: include a variety of ways to ensure that children / youth and families may participate in POPCORN			

Pillar 1 Infectious Diseases			
Deliverable	2023	2024	2025
Facilitate the integration of the four (4) Canadian infectious diseases networks: IMPACT, CPSP, CIRN and PICNIC, in clinical research on COVID-19			
Data previously collected by CPSP will be integrated with prospectively collected IMPACT data to provide a complete, harmonized dataset dating back to the start of the pandemic			
Ensure that POPCORN activities are cohesive with work being performed by CIRN			
Continued support of POPCORN projects inclusive of leadership of some projects where required			

Pillar 2 Inpatient Medicine			
Deliverable	2023	2024	2025
Mentor and support trainees and new investigators in developing research projects in POPCORN			
Promote Pediatric Inpatient Medicine as an academic discipline with its own research agenda			

Pillar 2 Inpatient Medicine			
Deliverable	2023	2024	2025
Facilitate the integration and collaboration across networks between pediatric inpatient medicine, emergency medicine, intensive care, and infectious diseases			
Ensure that POPCORN activities are informed by the Pediatric Inpatient Medicine perspective			

Pillar 3 Emergency Medicine			
Deliverable	2023	2024	2025
Facilitate inter-organizational relationships with other subspecialty-based national research organizations			
Facilitate coordination of prospective research recruitment across pediatric specialties			
Encourage interdisciplinary collaboration			

Pillar 4 Critical Care			
Deliverable	2023	2024	2025
Help to understand the clinical characteristics, risk factors, and evolution of pediatric patients who developed severe COVID-19 infection and were admitted to pediatric intensive care units			
Help to create a data platform to be used to timely launch research projects in case of a new pandemic, as well as to perform real-time surveillance and to inform public health			

Pillar 5 Epidemiology & Biostatistics			
Deliverable	2023	2024	2025
Provide epidemiologic and methods expertise and insight to the overall network and to specific project teams to complement and enhance the approach to POPCORN studies and research			

Pillar 5 Epidemiology & Biostatistics			
Deliverable	2023	2024	2025
Identify an Epi methods expert to collaborate with and provide consultation in partnership with each of the POPCORN teams and contribute to the overall aims of the studies			
Generate reports, figures, summaries, and data visualizations for CURNLS and POPCORN recruitment tracking and results, as needed			
Automate the process of generating reports and figures to ensure reproducibility and to respond to requests via efficient processes			
Serve as a hub for epidemiologists within the POPCORN network and work together to provide methodological expertise, review of proposals and study designs, interpretation of results, and feedback on scientific and governance aims			

Pillar 6 Data Governance			
Deliverable	2023	2024	2025
Develop and implement a sustainable national common data infrastructure for Canadian child health researchers and for public health			
Provide a rapid and efficient way to collect and report harmonized, real-time data for research and surveillance			
Develop the front-end components of the POPCORN data platform: a dashboard for centralized and site-level data queries (user tested across networks), and data collection modules (POPCORN core, Pandemic, and PICU data modules)			
Install the CODA-19 open-source data analysis platform in 6 Canadian pediatric centres to allow pooling of anonymized patient data from multiple local data sources			

Pillar 7 Biobanking Governance			
Deliverable	2023	2024	2025
Establish systems at each site to take advantage of residual samples (respiratory swabs, BAL fluid, serum / plasma) from POPCORN site hospital patients; collect dedicated samples for virologic and immunologic assays, using methods that optimize the preservation and yield of analytes for future studies			
Harmonize the sharing of prospectively collected pediatric samples, building on the infrastructure and processes of the biobank that already exists at several POPCORN sites and CoVaRR-Net, which allows the rapid sharing of samples between investigators			
Configure established biobanks at POPCORN sites as CoVaRR-Net branches, operating under a data and materials sharing agreement signed by POPCORN sites			

Pillar 8 Knowledge Mobilization			
Deliverable	2023	2024	2025
Build capacity and relationships with the POPCORN network and knowledge users (patient partners and decision-makers) to undertake and increase KM activities			
Establish methods and process for developing robust KM plans specific to priority projects			
Implement and evaluate KM plans			
Liaison and integrated knowledge transfer with the Public Health Agency of Canada
